ESP Prompts

5/20/22 Brent Roman   brent@mbari.org

1

What is a prompt?

- Wait for response to question from user

```
-> prompt "Press return to continue? "

Press return to continue? yEs

yEs
```

- Each prompt comes from a Thread

  - prompts from your client thread
    - answered interactively (as above)
  - to answer prompt from other thread named *x*

```
-> Thread[x].answer="yEs"   #remember, x could be :x or "x"

-> Thread[x].answer    #default answer is "yes"

-> answer    #if there is only one other thread prompting
```

Using Response Strings

```
-> csrReagent = prompt "Which CSR reagent? "

-> CSR.to csrReagent
```

- selects user specified CSR reagent

```
-> abort! "Because #{Thread.name} said so" if
      prompt("ABORT MISSION!? ").upcase == "YES"
```

- aborts mission…
  - if user response is "yes" or "YES"
